The World of Moisture
& It's Relationship to Flooring & Floor Covering Failure

Decision-making based on what you think you know carries tremendous risk

Join me for a fascinating look at the world of moisture as it relates to flooring and floor covering failure. Our journey includes . . .

- **Where does the moisture come from and how does it move**
- **What happens to a concrete slab when it's covered up**
- **Why the need for a fully enclosed interior and a temperature controlled interior environment before you start any installation**
- **Acclimation - 3 day's should be enough, don't you think?**
- **Waterproof is never within the flooring professionals scope of work - ever!**
- **Concrete Moisture Testing: the Tests, the Tools, the Methods**
  --learn how the tests work, what they measure and how to interpret the results
- **Moisture failures on the 32nd floor?!? - No Way!**

These topics, and many more, are brought together in a way that benefits you, the *floor covering professional*
